

Mental Arithmetic

Mental Arithmetic has been designed by teachers to provide pupils with unlimited practice in the basics of maths. The computer can generate endless sequences of new problems. Answering questions against the clock becomes almost compulsive for pupils. Upon completion of a set of questions, pupils can print out a certificate to record their achievement.

In twelve sections, Mental Arithmetic covers the whole curriculum for arithmetic, with numerous levels for each topic and options to set the time allowed to answer each question.

Addition and Subtraction

Directed Numbers 1

Multiplication

Division

Multiplication and Division

Directed Numbers 2

Estimation

Powers of 10

Indices

Parts of a Whole
