

The Uniform Polyhedra

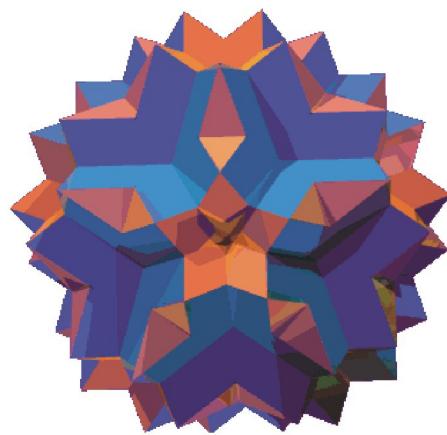

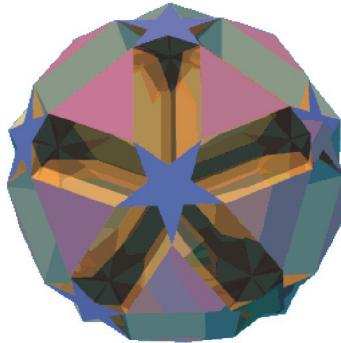

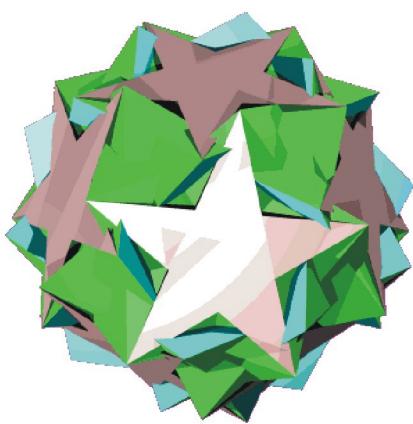

The faces of a uniform polyhedron are regular polygons. Each vertex of the polyhedron is surrounded by the same sequence of polygons.

There are three families of uniform polyhedra (prisms, antiprisms and crossed antiprisms).

There are also 73 uniform polyhedra that do not belong to one of these families?

**VIRTUAL
IMAGE**

This CD-ROM provides a stimulating library resource with stunning animations of all the uniform polyhedra and an introduction to their properties.
